Does location of cellular base stations affect 5G communication performance?

5G communication performance is highly correlated with the locations of cellular base stations (BSs). Many previous works have studied the placement of BSs, how.

What is the coverage rate of 5G base stations compared to NSGA-II?

As can be seen from Fig. 10, after optimizing the coverage of 5G base stations, 43 new 5G base stations and 13 3/4G shared base stations are included, resulting in a base station coverage rate of 92.5 %. This algorithm is compared with the traditional genetic algorithm and the multi-objective optimization algorithm NSGA-II.

How 5G mobile communication technology is affecting the network capacity?

With the rapid development of 5G mobile communication technology, the number of 5G users has significantly increased, leading to a corresponding expansion in network capacity . To meet the growing user demand, researchers have begun to focus on improving the throughput of base stations (e.g. Refs. [2, 3]).
