

Monocrystalline solar panels and solar panels

Overview

What are monocrystalline solar panels?

Monocrystalline solar panels are made with wafers cut from a single silicon crystal ingot, which allows the electric current to flow more smoothly, with less resistance. This ultimately means they have the highest efficiency ratings, longest lifespans, and best power ratings on the market, ahead of all other types of solar panels.

Why are monocrystalline solar panels better than polycrystalline panels?

The higher efficiency of monocrystalline solar panels means that they require less space to reach a given power capacity. So, monocrystalline solar panels will usually have a higher power output rating than either polycrystalline or thin-film modules.

How much power does a monocrystalline solar panel produce?

Most monocrystalline panels on the market today will have a power output rating of at least 320 watts, but can go up to around 375 watts or higher! Polycrystalline panel efficiency ratings will typically range from 15% to 17%. The lower efficiency ratings are due to how electrons move through the solar cell.

How are monocrystalline solar panels made?

Monocrystalline solar panels are created by developing a single crystal of silicon in a cylindrical form. This material is then cut into narrow wafers, from which solar cells are made. The wafers are then coated with an anti-reflective layer before being wired together to create a solar screen.
