

Myanmar Wind Power Energy Storage Project

Overview

What is the energy demand supply situation in Myanmar?

The Myanmar energy demand supply situation indicates that power generation mix must shift to more coal and hydropower, continued use of biomass, natural gas consumption, and appropriate increase of renewable energy such as solar PV and wind power generation.

What is Myanmar's energy policy?

Myanmar's energy policy aims to increase the use of its abundant water resources for hydropower development to reduce the need for fossil fuel power generation. Energy efficiency management can reduce energy consumption to minimise harmful environmental impacts.

How can Myanmar save energy?

Future savings in energy could be due to savings in primary energy supply in the residential, commercial, transportation, and industrial sectors. In this regard, Myanmar implemented a range of energy efficiency and conservation goals and action plans that target energy savings in all sectors.

What is the power resource balance scenario in Myanmar?

As shown in Table 12.2, the Power Resource Balance scenario (Scenario 3) has the lowest installed capacity at 23,594 MW by 2030, with hydro share at 38%, coal 33%, gas 20%, and renewables (solar, wind, etc.) at 8%. MW = megawatt. Source: Myanmar Energy Master Plan, 2015.
