## Overview

---

Do energy storage systems have an explosion risk?

The existing research findings on the explosion risk of energy storage systems struggle to effectively uncover the essence of accidents and accurately depict the shock dynamics of explosion and the evolution of disasters induced by the coupling of constraint boundaries.

Are lithium-ion battery ESS containers explosion safe?

In future explosion risk assessments of lithium-ion battery ESS containers, particular attention should be given to the potential for external explosion hazards caused by the vent structures.

What is the explosion-venting hazard of TR gas of lithium-ion battery?

Explosion-venting hazards of TR gas of lithium-ion battery were numerically analyzed. Peak  $P_{mfa}$  and  $P_{cv}$  dominated the explosion overpressure hazard in ESS container. The overpressure 'three-peak' structure was found outside the ESS container. The external explosion of TR gas increased the hazard outside the container.

What dominated the explosion overpressure hazard in ESS container?

Peak  $P_{mfa}$  and  $P_{cv}$  dominated the explosion overpressure hazard in ESS container. The overpressure 'three-peak' structure was found outside the ESS container. The external explosion of TR gas increased the hazard outside the container. Venting dynamic pressure hazard came from the external evolution accumulation.
