

# Nepal Energy Storage Power

## Overview

---

Why should we study pumped storage systems in Nepal Himalayas?

Nepal Himalayas provide an ideal testbed to study pumped storage systems given high topographic gradients, large flow fluctuations, and prevalent energy demand patterns.

Can a geospatial model predict energy storage capacity across the Nepal Himalayas?

In this study, we configured a geospatial model to identify the potential of PSH across the Nepal Himalayas under multiple configurations by pairing lakes, hydropower projects, rivers, and available flat terrain, and consequently estimate the energy storage capacity.

Can pumped storage hydropower be used in Nepal?

In this study, we assess the potential of pumped storage hydropower across Nepal, a central Himalayan country, under multiple configurations by pairing lakes, rivers, and available flat terrains. We then identify technically feasible pairs from those of potential locations.

Will Nepal become a seasonal power hub?

In total, 3012 GWh is estimated as theoretical potential and 1269 GWh (42% of theoretical) as technical potential across the Nepal Himalayas. PSH's large potential for energy storage in the Nepal Himalayas is a precursor for Nepal to become a seasonal power hub in the region.
