

PQ control of battery inverter

Overview

What is a p/q control strategy for photovoltaic grid-connected inverters?

In photovoltaic grid-connected (GC) and DG systems, one of the objectives that the grid-connected inverters (GCI) is the control of current coming from the photovoltaic modules or DG units. In this way, this paper describes a simple P/Q control strategy for three-phase GCI. Initially, the proposed control of the grid side is introduced.

What is a PQ control structure for a three-phase four-leg grid-connected inverter?

To meet these requirements, a PQ control structure for the three-phase four-leg grid-connected inverter in a synchronous reference frame based on feedback linearization control (FLC) is proposed.

What is the difference between p-q control and P-V control?

Adhikari and Li proposed a P-Q control method with solar photovoltaic, maximum power point tracking (MPPT), and battery storage in the grid-connected mode. Adhikari et al. proposed a two-selected control method using the P-Q control in the load-following mode while the P-V control was in the maximum power point tracking mode.

How to improve p-q control performance of three-phase grid-connected inverters?

Of course, the P-Q controllers of three-phase grid-connected inverters can be optimized by other theoretical PID methods . However, the P-Q control performance of three-phase grid-connected inverters can be further improved by adopting multi-objective evolutionary algorithms.
