

# **Power frequency inverter charging battery**

## Overview

---

What is an inverter battery charger?

The inverter battery charger is a crucial component, designed to convert electrical energy from the grid into a form that the battery can store. Most tubular batteries used in inverters operate at a voltage of 12V, 24V, or 48V. Ensuring your charger matches these specifications is essential for efficient charging.

How does a battery inverter change the AC frequency?

This is achieved by the battery inverter changing the AC frequency to signal the PV inverters to curtail their output power. The SMA default frequency shift power control, P (f), is set in the Grid Monitoring section in the EnnexOS or on the inverter.

What does an inverter charger do?

It regulates the voltage and frequency of the AC power, ensuring compatibility with standard electrical devices and appliances. The charger component of an inverter charger is responsible for replenishing the battery bank's energy. It converts AC electricity from the grid or a generator into DC power and supplies it to the batteries.

Can an inverter charge a battery concurrently?

Yes, it is entirely feasible to connect both an inverter and a charger to a battery concurrently. This setup allows for the dual functionality of charging the battery and providing AC power when needed. It's a practical approach for ensuring continuous power availability.
