

# **Price of hydraulic station with energy storage function**

## Overview

---

What is the capacity of pumped hydro storage station?

(b) Capacity of the pumped hydro storage station was 2400 MW. From Fig. B, Fig. 7, the power stability of the transmission lines must be ensured by abandoning wind or solar power when the WFs or PVs independently operate, owing to the power fluctuation characteristics, leading to a relatively low utilisation efficiency of renewable energy.

What are the benefits of pumped hydro storage station?

Contribution of pumped hydro storage station with different capacity to the consumption of wind and solar power. (a) Renewable energy reduction. (b) Transmission utilisation hours. (c) Carbon emissions reduction.

Are pumped hydro storage stations marketable in China?

Fig. 1. Capacity development of pumped hydro storage stations in China. In China, PHS are not fully marketable because of their imperfect power market mechanisms. Therefore, a two-part tariff, including the energy and capacity tariffs, is adopted as the benefit-recovery scheme of the PHS.

What are pumped hydro storage station constraints?

Pumped hydro storage station constraints. The operation constraints of the PHS include the available capacity of reservoir within a day, operation condition constraints, and generation and pumping power constraints.
