

# **Price of solar panel silicon wafer power generation**

## Overview

---

Silicon solar cell costs average 0.10-0.15/W (2023), with monocrystalline at ~0.12/W, polycrystalline lower; driven by polysilicon prices (~8/kg) and efficiency gains cutting production expenses. How much does a non Xinjiang wafer cost?

Currently, non-Xinjiang wafers with traceability data generally carry a quoted premium of RMB 0.15–0.2/pc. Starting February 2025, spot price updates for 183mm n-type wafers in dollar terms will be introduced. The high prices for M10 PERC and TOPCon cells is based mostly on those of Southeast Asian origins.

How much does non Xinjiang polysilicon cost?

Currently, non-Xinjiang polysilicon with traceability data generally carries a quoted premium of RMB 3–5/kg. Polysilicon prices in dollar terms are prices for polysilicon with non-China origins in dollar terms, not translated from RMB prices.

How much does n-type granular silicon cost?

On average, the transaction price for n-type dense polysilicon reached RMB37,100/ton, up 6.92% week-on-week. The transaction price range for n-type granular silicon was RMB34,000-37,000/ton, with an average transaction price of RMB35,600/ton, a 6.27% increase from the previous week.

Are n-type wafer and cell prices increasing or decreasing?

While n-type wafer and cell prices have increased, 3 PERC module types have experienced declines. The data refers to average product prices in China. The data was collected by Chinese market research firm Gessey PV Consulting. Disclaimer: TaiyangNews does not guarantee reliability, accuracy or completeness of this price index' content.

## Price of solar panel silicon wafer power generation

---

### Solar price trend

Transaction prices continue to drift downward. While wafer prices still carry downside risk, polysilicon costs now provide a firming floor, limiting the extent of further declines in wafer ...
