How many uninterruptible power supplies (UPS) are there?

This section provides an overview for uninterruptible power supplies (ups) as well as their applications and principles. Also, please take a look at the list of 68 uninterruptible power supply (ups) manufacturers and their company rankings.

What is an uninterruptible power system (UPS)?

Uninterruptible power systems (UPS) are devices that provide emergency power to a load when the primary power source fails, using a battery backup to protect hardware such as computers and data centers from unexpected power disruptions.

What is an uninterruptible power supply?

Uninterruptible power supplies are used in computer installations where power outages can mean loss of stored data (for example, in on-line reservations systems). Lower-power systems are provided to maintain continuous power to critical instrumentation (for example, a boiler-flame detector in a power plant).

What is an uninterruptible power supply (UPS battery backup)?

An Uninterruptible Power Supply (aka a UPS Battery Backup) protects vital connected equipment -- computers, servers, and telecommunications equipment -- from power outages. During an outage, that small UPS Battery Backup under your desk at work gives you enough time to save your spreadsheet and properly shut down your computer.
