

# **Rooftop solar power system prices**

## Overview

---

The average cost of a rooftop solar system in 2025 varies based on location, system size, and energy usage. For residential properties, installation typically ranges between \$2.30 and \$3.20 per watt. What is rooftop solar power?

Rooftop solar power, also known as rooftop photovoltaic (PV) systems, refers to solar panels installed on residential or commercial building rooftops to generate electricity. These systems convert sunlight directly into electrical energy through photovoltaic cells, providing clean, renewable power for your home or business.

How efficient are rooftop solar panels?

Modern solar panels achieve efficiencies of 18-22% for residential applications, meaning they convert roughly one-fifth of the sunlight that hits them into electricity. Premium panels from manufacturers like Panasonic can achieve even higher efficiencies, reaching 22-24%. A complete rooftop solar system consists of several essential components:

Is rooftop solar a viable energy solution in 2025?

Rooftop solar power has transformed from a niche technology into a mainstream energy solution, with over 4.4 million American homes now powered by solar panels. As we enter 2025, technological advances, improved financing options, and strong federal incentives have made rooftop solar more accessible and cost-effective than ever before.

How much do solar panels cost?

The price of solar panels changes depending on where you live, but the average for installation is just under \$29,000 or \$2.75 per watt. On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar. Dion in Nevada said their 10-kW system cost about \$20,000, which is about the national average price for a 7-kW system.
