

Safety distance around Vietnam energy storage containers

Overview

How far should hazardous chemicals be stored?

It also stipulates the safe distance to be secured at storage areas for hazardous chemicals. When stored individually, a minimum distance of 5 meters is required. On the other hand, the safe distance between the chemical storage area and other areas with a heat source or potential sparks is defined as follows.

How far should a chemical storage area be from a heat source?

When stored individually, a minimum distance of 5 meters is required. On the other hand, the safe distance between the chemical storage area and other areas with a heat source or potential sparks is defined as follows. The table below shows the risk associated with contact based on the hazards of chemicals.

When does the hazardous chemicals regulation come into force in Vietnam?

This technical regulation will enter into force on July 1 of 2021. Any facility that handles hazardous chemicals must be compliant with the regulation within 18 months of the enforcement of the Circular.
