

# San Jose Energy Storage Station Installation

## Overview

---

Does California have a battery storage system?

California leads the U.S. and trails only China globally in battery storage capacity. The state has more than 200 utility-scale systems, and more than 250,000 commercial and residential installations, totaling more than 15,700 MW statewide.

Why is California a good state for battery storage?

It also supports the California Public Utilities Commission's approval of new safety standards, and enhanced oversight of emergency plans for grid-scale battery energy storage systems. California leads the U.S. and trails only China globally in battery storage capacity.

What is Newsom's battery energy storage program?

Newsom in 2024 initiated a state-level effort to innovate and strengthen safety standards for battery energy storage systems through cross-agency collaboration. Key parts of that program include an update to the California Fire Code to include specific fire safety requirements for stationary lithium-ion battery storage systems.

How many energy systems does California have?

The state has more than 200 utility-scale systems, and more than 250,000 commercial and residential installations, totaling more than 15,700 MW statewide. California officials said the state this year has reached a 100% clean energy goal on 91% of days (138 out of 151) through May.
