

Small power stations equipped with energy storage

Overview

Why are small and medium-sized pumped storage power stations important?

Small and medium-sized pumped storage power stations have unique development advantages, and the development and construction of small and medium-sized pumped storage power stations have important practical significance for optimizing the energy structure of Zhejiang Province.

Should pumped storage power stations be planned according to local conditions?

In 2021, the National Energy Administration made it clear in the Medium and Long Term Development Plan for Pumped Storage (2021–2035) that the construction of small and medium-sized pumped storage power stations should be planned according to local conditions in provinces with better resources.

Can pumped storage power stations maximize power balance of regional power grid?

The existing literature shows that pumped storage power stations can maximize the power balance of regional power grid, ensure the safe and stable operation of regional power grid, and realize the economic optimization of power grid operation through reasonable modeling and new energy distribution schemes.

What is the control scheme of a pumped storage power station?

The control scheme is one of the core technologies of small and medium-sized pumped storage power stations. The medium and small pumped storage power station can control energy storage and discharge by adjusting the difference of water level in the reservoir.
