

# **Small solar power generation system in Tanzania**

## Overview

---

Is solar power a solution to rural energy poverty in Tanzania?

Rural energy poverty persists in Tanzania, with 77% of the population not having access to electricity. A combination of high solar radiation and slow extension of the national energy grid has raised off-grid solar PV based mini-grids as a potential solution.

Are solar PV based mini-grids feasible in Tanzania?

The purpose of this paper is to provide a comprehensive analysis of the progress and barriers for the diffusion of solar PV based mini-grids in rural areas of Tanzania, a country with both high technical potential for solar energy (Grothoff, 2014), and one of the best regulatory frameworks for mini-grids in the Global South (Odarno et al., 2017).

How much electricity does solar PV generate in Tanzania?

In central Tanzania, 1 MWp of solar PV generates about 1,800 MWh per year and requires about 1 hectare of land. Theoretically, solar PV could generate large shares of electricity.

How does Tanzania support solar development?

Given that, the Tanzanian Government supports solar development within the country by removing VAT and import taxes on the main solar components (panels, batteries, inverters, and regulators). Solar resources in Tanzania are especially present in the central region, and they are being exploited for both off-grid and grid-connected solutions.

## Small solar power generation system in Tanzania
