## Overview

Do photovoltaic curtain walls improve the cost-effectiveness ratio?

After sensitivity analysis of the cost of photovoltaic curtain walls and the efficiency of solar panels, it was found that as the cost increases, the economy of photovoltaic curtain walls gradually deteriorates, and improving the efficiency of solar panels can improve the cost-effectiveness ratio of each facade.

What is the annual power generation of photovoltaic curtain walls?

Annual power generation of photovoltaic curtain walls on different facades of buildings. According to the characteristics of photovoltaic modules, the attenuation rate of photovoltaic modules is around 2% in the first year, and the average annual attenuation rate from the following year is around 0.6%.

What are some examples of photovoltaic curtain walls?

Examples include colored solar panels in Denmark [ 27 ], Building-integrated Photovoltaics (BIPV) walls in Italy [ 28 ], and the Ekoviikki Sustainable City Project in Finland [ 29 ]. Currently, research on photovoltaic curtain walls is still in its early stages, primarily centered around the performance evaluation of such systems.

How much power does a photovoltaic curtain wall generate?

Based on Table 7 and Table 8, the annual and total power generation data for the photovoltaic curtain walls on different facades can be obtained. The south facade's photovoltaic curtain wall has the highest power generation capacity, with a cumulative power generation of 17,730.42 MWh over a 25-year period.
