

# Solar PV panel rail installation

## Overview

---

How do I mount a 4x4 solar panel?

Once the mount frames are in place, the aluminum rails can be mounted. The rails in turn allow easy installation of the PV panels and inverters. In our case, the rails were provided by IronRidge. The IronRidge PV mounting rail. The "L" bracket holds the rail down to the 4X4 mounts.

How do solar panel mounting rails work?

Solar Panel mounting rails are used to install solar panels on top of roofs or support ground-mounted systems. Electricity is created after sunlight hits the panels. The inverter attached to the solar panel converts the electricity into usable energy to run various home appliances. Solar Panel mounting rails and racking are essential components in the installation process.

How do you mount a PV panel?

The longer bolt and clamp in the upper slot toward the back of the picture is the clamp that goes between two PV panels to hold both of them down. The clamps used must match the brand and style of PV panel you want to mount, but a wide variety of clamps are available. This is a nice system and saves a lot of time in the mounting process.

How do you mount a solar panel inverter?

To mount the inverters, mark the center of each of the PV panels on the rail, so you know about where each inverter will go. Mount the micro-inverters starting with the one that will be nearest the junction box that will carry the PV power to the house. Orient the micro-inverter so that its AC output (male) connector is toward the junction box.
