

Solar Water Pump Wholesale

Overview

What is a solar water pumping system?

A solar water pumping system consists of a PV array, a motor, and a bore pump. Solar water pumping arrays can have permanent mounts, or installers may place them on passive trackers to increase pumping time and volume. Both AC and DC motors with centrifugal or displacement pumps are used in these circumstances.

What is the cost of a solar water pump?

Solar water pumps can cost as little as less than \$1,500 for the most inexpensive models, while large systems can cost over \$20,000. The cost can be reduced through Renewable Energy Certificates (RECs). Most solar water pumps rarely exceed 2 horsepower in size.

Who makes solar water pumps?

WBS began producing water pumps in 1998. In 2008, we independently developed and produced solar water pumps. We have OEM production for more than 200 solar pump dealers around the world. Over the past 10 years, we have produced more than 150,000 sets of solar water pumps that have been exported to other parts of the world.

Why should you choose a solar water pump supplier?

Enhance your Water Pump setup with our premium Solar Water Pump. Collaborating with a water pump supplier for wholesale acquisitions can significantly reduce costs, streamline procurement processes, and enhance product availability.
