

Solar and PV panel prices

Overview

Most residential solar panels range from \$0.70 to \$3.00 per watt before incentives, with high-efficiency models typically costing more. How much do solar panels cost?

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type, and installer.

What is residential solar PV?

Residential solar PV refers to home solar power systems that generate electricity using photovoltaic (PV) panels. The solar price for residential installations depends on factors like system size, installation costs, location, and available incentives.

How much does a PV panel cost in 2025?

Understanding the complete PV panel prices helps you make informed decisions. In 2025, solar cell prices for residential users range from \$2.80 to \$3.80 per watt, but this can vary by the location and size of the system, as well as the complexity of the installation.

What is the relative cost of solar energy?

Another measure of the relative cost of solar energy is its price per kilowatt-hour (kWh). Whereas the price per watt considers the solar system's size, the price per kWh shows the price of the solar system per unit of energy it produces over a given period of time. $\text{Net cost of the system} / \text{lifetime output} = \text{cost per kilowatt hour}$
