

# **Solar grid-connected inverter off-grid operation**

## Overview

---

What is the difference between a grid-connected and off-grid solar inverter?

The main differences between an off-grid solar inverter and a grid-connected one are the working environment and the functions each performs. The grid-connected inverter needs to be connected with the public grid, wherein it feeds extra power back into the grid. It cannot work independently when the grid is down.

What is a grid connected solar inverter?

This type of inverter is suitable for remote areas with unstable power supply or no access to the power grid. A grid-connected solar inverter is a device that converts the direct current output by solar panels into alternating current and directly supplies it to the power grid.

What is an off-grid solar inverter?

An off-grid solar inverter is a device that converts the direct current output by solar panels into alternating current. It is not connected to the power grid and independently supplies power to the load. This type of inverter is suitable for remote areas with unstable power supply or no access to the power grid.

What is an off-grid hybrid inverter?

Commonly known as an off-grid hybrid inverter, it combines solar + battery + optional grid power, ensuring uninterrupted energy supply. Ideal for users in regions with occasional grid access who prioritize solar autonomy but value backup flexibility.
