

# Solar inverter sol mode

## Overview

---

How does solar inverter work?

Solar inverter works under the battery mode, once the load capacity is less than 10% of the inverter rated power, the inverter will start and stop regularly to achieve energy saving effect. When the load is greater than 10% of the inverter rated power, the inverter will out of this energy saving mode.

What is ECO mode in solar inverter?

ECO (Energy saving) mode The solar inverter works in battery mode, and the load capacity is lower than 10% of the rated power of the inverter, the inverter will start and stop regularly to achieve energy saving effect. When the frequency load is greater than 10% of the rated power of the inverter, the inverter will exit the energy-saving mode.

What are the working modes of a solar inverter?

Usually solar inverters have three working modes, PV (battery) priority, mains priority and ECO mode. Which working mode can maximize the utilization of photovoltaic energy and meet customer requirements as much as possible. It certainly seems an appropriate subject of discuss.

What are the working modes of xindun solar inverter?

Xindun solar inverters have three working modes: PV mode, mains mode and ECO mode. Which inverter mode can maximize the utilization of pv energy and meet customer requirements as much as possible?

How to choose the working modes of solar inverter?

Usually solar inverters have three working modes, PV (battery) priority, mains priority and ECO mode.
