

Solar inverter wattage

Overview

A solar inverter should closely match your solar system's output in kW—typically within 80% to 120% of your total panel capacity. Too big = wasted money. Too small = wasted energy

What are the different solar inverter sizes?

Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

What wattage should a solar inverter be?

The inverter wattage must be the same or greater than your solar panel's watts. Here is a chart that shows the watts consumption of various appliances and what inverter size you will need. Note that this guide includes a 20% safety margin for the inverter watts. This safety percentage can be adjusted.

Is there a difference between inverter size and solar panel capacity?

However, this should always be within the recommended ratio. This is the reason why you may see a 'mismatch' between inverter size and solar panel capacity - for example, a 6.6kW system advertised with a 5kW inverter.

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.
