

Solar island circulating water pump

Overview

What is a circulation pump?

These pumps are included in our solar water heating packages, and are used to circulate heat transfer fluid in the primary or secondary solar hot water loops. We have a number of circulation pump solutions for all types of applications, from single family home hot water systems, to industrial heating and air conditioning systems.

What are solar panels plus pumping solutions?

Solar Panels Plus provides a number of different pumping solutions for solar hot water and solar space heating systems. These pumps are included in our solar water heating packages, and are used to circulate heat transfer fluid in the primary or secondary solar hot water loops.

How does the Td5 solar pump work?

For solar system loops, the TD5 Solar pump can be powered directly from a PV panel. The sun comes up, heat builds in the solar hot water panel and at the same time electricity is made in the PV panel. The pump slowly starts with the smallest amount of current and pushes the heated water to the storage tank.

Can a DC solar pump be used without a power grid?

The DC solar pump can be used for most circulation pump applications without any connection to a traditional power grid. High efficiency, the DC solar pump can be connected directly to a photovoltaic (PV) panel. Thanks to its small size, and high efficiency, it has exceptionally low power consumption.
