## Overview

---

What is a monocrystalline solar panel?

Monocrystalline panels: Made from a single, pure crystal structure, they often boast the highest efficiency and space-saving capabilities. They can be identified by their consistent dark look and rounded edges. ZEN Energy's panel of choice.

How are monocrystalline solar panels made?

Monocrystalline solar panels are made from one continuous crystal structure, which is where they get their name. They're manufactured using the Czochralski process to create a large, single-crystal silicon ingot. The silicon ingot is then sliced into thin wafers to make solar cells.

Are monocrystalline solar panels better than polycrystalline panels?

Monocrystalline panels are more expensive to produce and therefore cost more, but they offer a higher return on investment over the long term. Monocrystalline solar panels are made from a single crystal structure of silicon, making them more efficient than polycrystalline panels.
