

Solar panel inverter power storage equipment

Overview

What is a solar panel inverter?

The solar panel inverter is the heart and soul of your solar power system. It connects directly to your solar panels to convert the DC current electricity produced by solar panels into AC current electricity you can use in your home, store in a battery or feed back into the power grid.

What makes a good solar panel inverter?

Good solar panel inverters will feature good cooling systems to withstand the hot Australian weather and offer good efficiency. The inverter you get should also be approved for use in Australia by the Clean Energy Council (CEC). If it's not, stay away!.

What is solar inverter based generation?

As more solar systems are added to the grid, more inverters are being connected to the grid than ever before. Inverter-based generation can produce energy at any frequency and does not have the same inertial properties as steam-based generation, because there is no turbine involved.
