## Overview

---

What is a solar panel battery?

A solar panel battery, or solar battery, is an essential solar system component that stores energy generated by solar panels for later use.

Why do solar panels use batteries?

The batteries have the function of supplying electrical energy to the system at the moment when the photovoltaic panels do not generate the necessary electricity. When the solar panels can generate more electricity than the electrical system demands, all the energy demanded is supplied by the panels, and the excess is used to charge the batteries.

What type of batteries do solar panels use?

The two main types of batteries used in solar energy systems are lithium-ion and lead-acid. Lithium-ion batteries are more efficient, longer-lasting, and generally provide better performance, while lead-acid batteries are cheaper but less efficient and have a shorter lifespan. How do solar panels convert sunlight into electricity?

.

What is solar battery technology?

Solar battery technology stores the electrical energy generated when solar panels receive excess solar energy in the hours of the most remarkable solar radiation. Not all photovoltaic installations have batteries. Sometimes, it is preferable to supply all the electrical energy generated by the solar panels to the electrical network.
