

Solar panel style

Overview

What are the different types of solar panels?

Discover the six main types of solar panel, including thin-film, perovskite, and the best type for your home: monocrystalline. What kind of home do you live in?

When you're considering whether to get solar panels, it's a good idea to look into all the different types, to ensure you choose the best system for your home.

What is the best type of solar panel?

The best type of solar panel is monocrystalline. They're more efficient than any other panel currently on the market, meaning you'll be making the best use of your roof space. And they have longer lifespans than all their competitors, which boosts their return on investment beyond that of polycrystalline panels or solar tiles.

What are the different types of rooftop solar panels?

There are three types of rooftop solar panels: polycrystalline, monocrystalline, and thin film panels. We go into the specific characteristics of each type in this article, but let's focus on aesthetics here because the color of your solar panels will depend on the type of panel you choose to buy.

Do solar panels make your home look unattractive?

One of the biggest misconceptions about going solar is that solar panels will make your home look unattractive. While this may have been true of older solar panel models – which were typically bright blue with prominent grid patterns and visible wiring – the design of modern monocrystalline solar panels have changed the game.
