

Solar panels and wattage

Overview

How many Watts Does a solar panel produce in 2025?

About 97% of home solar panels installed in 2025 produce between 400 and 460 watts, based on thousands of quotes from the EnergySage Marketplace. But wattage alone doesn't tell the whole story. In fact, efficiency matters more than wattage when comparing solar panels—a higher wattage can simply mean that a panel is larger.

What is solar wattage?

Wattage refers to the amount of electrical power a solar panel can produce under standard test conditions (STC), which simulate a bright sunny day with optimal solar irradiance (1,000 W/m²), a cell temperature of 25°C, and clean panels. In simpler terms, a panel's wattage rating tells you its maximum power output under ideal conditions.

How much wattage should a solar panel have?

When considering solar panel sizes and wattage, you'll typically find options ranging from 250 to 400 watts. Opting for higher wattage units can be a game-changer, especially for those with limited roof space.
