

Solar panels can generate electricity for household use

Overview

How is solar energy used to power your home?

Most home solar systems are “grid-tied” meaning that the solar system, home electrical system, and local utility grid are all interconnected, typically through the main electrical service panel.

What is solar energy used for?

Solar technologies can harness this energy for a variety of uses, including generating electricity, providing light or a comfortable interior environment, and heating water for domestic, commercial, or industrial use. There are three main ways to harness solar energy: photovoltaics, solar heating & cooling, and concentrating solar power.

Do solar panels generate electricity during the day?

Solar panels require sunlight to generate electricity, so they do not generate electricity during the day. However, home solar systems typically generate excess electricity during the day, which can be stored in batteries or sent to the local grid in exchange for net metering credits.

What is solar energy?

Solar power is energy from the sun that is converted into thermal or electrical energy. Solar energy is the cleanest and most abundant renewable energy source available, and the U.S. has some of the richest solar resources in the world.
