

# Solar panels farmland

## Overview

---

How can farmers benefit from solar energy?

Farmers can benefit from solar energy in several ways—by leasing farmland for solar; installing a solar system on a house, barn, or other building; or through agrivoltaics. Agrivoltaics is defined as agriculture, such as crop production, livestock grazing, and pollinator habitat, located underneath solar panels and/or between rows of solar panels.

Should solar energy be located on farmland?

Locating solar energy on farmland could significantly increase the available land for solar development, while maintaining land in agricultural production and expanding economic opportunities for farmers, rural communities, and the solar industry.

Can you build a solar farm on agricultural land?

While obtaining planning consent for ground-mounted solar farms on agricultural land can be challenging – Andrew Shirley, our Head of Rural Research, advises it can “easily take ten years to get a scheme off the ground” - rural properties often feature large barns with roofs suitable for solar panel installations.

Why are farmers planting crops under solar panels?

One analysis of the unexpected reason farmers are planting crops under solar panels notes that many crops grown in these systems, including vegetables and specialty fruits, benefit from the moderated temperatures and lower evapotranspiration beneath the arrays.
