## Overview

---

What is the Sophia Project?

These aspects are covered by the SOPHIA project. A 3 kWe-size pressurized HTE system, coupled to a concentrated solar energy source will be designed, fabricated and operated on-sun for proof of principle. Second, it will prove the concept of co-electrolysis at the stack level while operated also pressurized.

Is there a potential market for Sophia technology?

A large potential market exists for the SOPHIA technology with production capacities. In 2010 the European Commission has adopted the Communication "Energy 2020 - A strategy for competitive, sustainable and secure energy". It includes five headline targets that set out where the EU should be in 2020.

What is the techno-economic optimal configuration of Sophia plant?

Concerning the H<sub>2</sub> production, it was observed that the techno-economic optimal configuration is when the chemical process part of SOPHIA plant works with a baseload, the intermittency of the solar power generation being smoothed by the CSP process part.

Does Sophia plant need to increase its production?

In case SOPHIA plant need to increase its production (during the night for example) electricity market was investigated and we found that electricity average annual market price was 34.6€/MWh in 2014 For France and prospective prices were estimated by 2030.
