

# St Johns led solar street light

## Overview

---

What is a solar street light?

A solar street light is a raised lighting system powered by a photovoltaic (PV) module charging a battery that runs an LED luminaire at night. Modern systems are off-grid, smart-controlled, and designed to operate through low-sun periods. Pole/brackets & wiring, optional sensors/remote monitoring.

Why should you choose a solar LED street light system?

A properly sized solar LED street light system ensures consistent brightness, reliable battery backup, and optimal solar panel performance, making it a sustainable and cost-effective lighting solution. Choosing the right solar panel type is essential for maximizing the efficiency and performance of a solar-powered street lighting system.

How to design a solar street light?

1. Solar Street Lighting Demand Design Formula:  $P_{LED} = E \times A / (\eta \times U \times K)$   
Example: Road width 6m, distance between lights 25m, target illuminance 20 lx →  $P_{LED} = 20 \times (6 \times 25) / (0.85 \times 0.5 \times 0.75) = 20 \times 150 / 0.32 \approx 94W$  → Choose a 100W LED module (Luminous flux 15,000 lm)  
2. Solar Street Light Photovoltaic System Capacity Calculation Steps: 3.

Who makes the best solar street lights?

Your reputation is important to us at Solar Lighting International and we manufacture the highest quality, best solar street lights available. We will collaborate with you to design a solar street lighting system tailored to your requirements and budget.
