

# Syria Energy Storage Power Station

## Overview

---

Is Syria's energy system in ruins?

Syria's energy system is in ruins. To rebuild energy security the country's new government faces two major challenges. The first, vital for Syria's swift recovery and political stability, is bringing reliable flows of electricity and fuel to its people.

What if Syria doesn't have reliable energy supplies?

The lack of reliable energy supplies is a major concern for Syrian citizens and its new government, making it a key point of leverage. Qatar and Türkiye have stepped in to provide short-term assistance. The two states have provided two floating power stations, while Türkiye is also connecting its grid to Syria.

Why does Syria have a low electricity supply?

The war has seen a drop in electricity generation capacity from 8 500 Megawatts to just 3 500, primarily due to the destruction of key power plants including Mahardah, Aleppo and Zayzoun. The lack of reliable energy supplies is a major concern for Syrian citizens and its new government. Syria's oil and gas sector is in an even worse state.

Should Syria become an energy hub?

In the longer term, it should offer Syria a role in an interconnected Eastern Mediterranean energy hub with independent access to the EU market for gas and electricity. For more than a decade, Syrians have been coping with severe energy shortages. Years of war and division have crippled over 50% of the country's electricity grid.

## Syria Energy Storage Power Station

---

MOTOMA's Versatile Energy Storage System In Syria

Jan 11, 2024 · The MOTOMA Energy Storage System, containing solar panels, inverte, and LiFePO4 lithium batteries, is designed to seamlessly power daily-use appliances and ...
