

# The capacity of Eritrea s solar container lithium battery pack is 49kWh

## Overview

---

What is energy storage container?

SCU uses standard battery modules, PCS modules, BMS, EMS, and other systems to form standard containers to build large-scale grid-side energy storage projects.

How much energy does a 400V pack produce?

A 400V pack would be arranged with 96 cells in series, 2 cells in parallel would create pack with a total energy of 34.6kWh Changing the number of cells in series by 1 gives a change in total energy of  $3.6V \times 2 \times 50Ah = 360Wh$ . Increasing or decreasing the number of cells in parallel changes the total energy by  $96 \times 3.6V \times 50Ah = 17,280Wh$ .

How much energy does a 200Ah 400V pack use?

Repeating this calculation with a 200Ah cell and the same ~400V pack requirements shows that the smallest total energy for the pack is 69kWh. Also, the increments are 69kWh for each increase in the number of cells in parallel. This could be a very cost driven pack design, but is not so flexible in total capacity.

What is a plug & play lithium-ion battery storage container?

Plug&Play lithium-ion battery storage container; Various usage scenarios of on-grid, off-grid, and micro-grid. All-in-one containerized design complete with LFP battery, bi-directional PCS, isolation transformer, fire suppression, air conditioner and BMS; Modular designs can be stacked and combined.
