

# The more solar batteries are charged the less energy they can store

## Overview

---

How do solar batteries work?

Without a battery, this excess energy typically flows back to the electrical grid. With a solar energy storage system, you can capture and store this surplus energy for use during evenings, cloudy days, or power outages. Understanding how solar batteries work requires knowing how they fit into the broader solar ecosystem:.

What is solar battery energy storage system?

Solar Battery Energy Storage Systems (Solar BESS) capture energy from the sun and store it as chemical, thermal, or mechanical energy. Like batteries in your smartphone or laptop, BESS batteries are charged with the energy, in this case from the sun, which is then stored and distributed as electricity to meet energy demands.

Do I need battery storage for my solar system?

If you want battery storage for your solar system, you just need to find the right battery and decide how much storage you need. Your installer can figure out how much energy you use, what your essential loads are—like lights, refrigerator, and Wi-Fi—and how much energy they use daily to determine storage capacity needs.

Why do solar panels need a battery?

Solar batteries serve as the bridge between when your panels produce energy and when you actually need it. During sunny days, your solar panels often generate more electricity than your home consumes. Without a battery, this excess energy typically flows back to the electrical grid.
