

Tilt angle of solar panels in Sao Tome

Overview

To maximize your solar PV system's energy output in São Tomé, São Tomé and Príncipe (Lat/Long 0.3417, 6.7286) throughout the year, you should tilt your panels at an angle of 0° for fixed panel installations. Are photovoltaic panels optimal tilt angles?

This study provides estimates of photovoltaic (PV) panel optimal tilt angles for all countries worldwide. It then estimates the incident solar radiation normal to either tracked or optimally tilted panels relative to horizontal panels globally. Optimal tilts are derived from the National Renewable Energy Laboratory's PVWatts program.

What is the optimal tilt angle for fixed tilt solar panels?

Table 1. Optimal tilt angles for fixed tilt solar PV panels for all countries of the world. Indicates the optimal tilt angle is between $\pm 10^\circ$, thus panels will likely be tilted in practice either $+10^\circ$ for positive values or -10° for negative values to allow for rain to naturally wash them. Data are derived from PVWatts (NREL, 2017).

Why is tilt angle important for a fixed-tilt PV panel?

A critical parameter for installing fixed-tilt panels is the tilt angle, since PV panel output increases with increasing exposure to direct sunlight. Energy modelers also need to know the optimal tilt angle of a panel for calculating regional or global PV output in a given location or worldwide.

Which latitude should a solar panel be tilted?

Tracking provides little benefit over optimal tilting above 75° N and 60° S. Tilting and tracking benefits generally increase with increasing latitude. In fact, annually averaged, more sunlight reach tilted or tracked panels from 80 to 90° S than any other latitude.
