

Togolese oil refinery uses 80kWh collapsible containers

Overview

How much energy does Togo use?

In total, electricity supply of 1.162 GWh is thus achieved through distribution losses, resulting in a final electricity consumption of 876 GWh. Togo's total energy consumption is divided into three sectors. The largest share, 76%, is in the use of biomass, followed by petroleum products 20%. Only 4% of energy is used in the form of electricity.

Where does Togo's energy come from?

Togo's energy consumption comes from three sources: biomass, petroleum products and electricity. Biomass consumption comes entirely from domestic resources. The total production amounts to 31.788 GWh of primary energy, with the largest part coming from firewood and the rest from plant waste.

How much wood-energy is consumed in Togo?

Based on the results of the in-depth study on the dynamics of wood-energy use in Togo by UCN REDD+, the volume of wood-energy consumed by households and socio-professional groups is estimated at 7,500,000 m³/year. In rural areas, the energy needs of the majority of the households are still met by charcoal and firewood.

What are the challenges faced by Togolese energy sector?

Electrification of rural Areas. The Togolese energy sector, particularly in rural areas, is characterized by inadequate or missing infrastructure, expensive connections, low supply and poor quality of supply. The electrification rate per inhabitant in 2019 is 45 % nationwide, but only 8 % of rural areas are electrified.
