

# **Ukrainian wind and solar hybrid power generation system**

## Overview

---

Does Ukraine have solar energy?

Solar energy in Ukraine is still in its early stages but has significant potential. Ukraine's annual solar energy volume is higher than that of Germany, one of the industry leaders. From 2018 to 2020, solar energy capacity increased nearly fivefold.

Could solar power be the backbone of Ukraine's energy system?

The war against Ukraine has led to massive destruction of the energy infrastructure. One consequence of this is blackouts in cities. In the future, renewables such as wind and solar power could form the backbone of Ukraine's electricity system. (Image: Oleksii Maznychenko / Adobe Stock).

Can solar power help prevent corruption in Ukraine?

They have determined that solar and wind energy would quickly deliver a distributed power supply system and prevent corruption. The war against Ukraine has led to massive destruction of the energy infrastructure. One consequence of this is blackouts in cities.

How much energy can Ukraine generate?

This technical potential is enormous. The researchers estimate that the potential for wind energy is around 180 gigawatts, while for solar energy it's around 39 gigawatts. A total capacity of 219 gigawatts would vastly exceed the generation capacity of 59 gigawatts that Ukraine had at the start of the war.
