

Uninterruptible Power Supply Device Agent

Overview

What is an uninterruptible power supply?

Uninterruptible power supplies provide power to critical loads in the event of a power failure. Unlike emergency generators, UPS systems provide power immediately, but only for a short period of a few minutes - until a backup power supply comes online or until the load completes its shutdown sequence.

What is an uninterruptible power system (UPS)?

Uninterruptible power systems (UPS) are devices that provide emergency power to a load when the primary power source fails, using a battery backup to protect hardware such as computers and data centers from unexpected power disruptions.

How do I Choose an uninterruptible power supply for DC applications?

Our uninterruptible power supplies for DC applications provide reliable protection against supply interruptions. Select the appropriate DC UPS for your application. Our uninterruptible power supplies for AC applications provide a pure sine curve at the output. Select the ideal AC UPS and ensure superior system availability.

What is uninterrupted power supply (UPS)?

Uninterrupted Power Supply (UPS) is a device that delivers emergency power to a load when the main power source fails. This capability is primarily achieved through a battery or other energy storage device, supplemented by an inverter that converts the DC power from the battery to AC power.
