

# Uninterruptible power supply to power 10w equipment

## Overview

---

What is an uninterruptible power supply (UPS)?

An Uninterruptible Power Supply (UPS) is a device designed to provide backup power when the primary power source fails or when voltage levels drop below acceptable limits. UPS systems are commonly used in computers, server farms, and data centers to ensure uninterrupted operation and protect digital data from power-related disruptions.

What is an uninterruptible power system?

As a whole, Uninterruptible Power Systems are vital for ensuring your equipment remains powered during outages or disruptions. Understanding the differences between online, offline, and line-interactive UPS systems will help you choose the right one for your needs. Offline UPS: Great for home use and low-demand devices.

How does a ups protect a device from sudden power failure?

An uninterruptible power supply (UPS) protects valuable devices from sudden power failures by providing backup power during power outages. This ensures a steady power supply to connected devices.

Are IPOWER DC UPS silent?

The iPower DC UPS are silent in operation. There are no audible alarms or cooling fans. The iPower-H is an AC/DC plug in unit that replaces the existing “wall wart” power supply thereby taking up no extra installation space. The single 3350mAh battery provides up to an hour back up for low powered routers operating from 12Vdc.
