

# Ups off-solar container grid inverter

## Overview

---

What is an off grid solar container unit?

Attaching to the grid can also be expensive and this can be an issue in the UK as well as Africa or Latin America. An Off Grid solar Container unit can be used in a host of applications including agriculture, mining, tourism, remote islands, widespread lighting, telecoms and rural medical centres.

How does a ups inverter work?

The rectifier circuit in the UPS converts the grid AC to DC to charge the battery. The UPS serves as a filter between the grid AC, and the AC is needed for critical power devices. There is no switching when the grid power is interrupted, as the UPS inverter will continue to function for as long as the UPS battery has sufficient charge.

Can a containerized Solar System be installed off-grid?

Off-Grid Installer have the answer with a containerized solar system from 3 kw up wards. Systems are fitted in new fully fitted containers either 20 or 40 foot depending on the size required.

What happens if a ups inverter is always on?

As the UPS inverter is always on, there is no switching time when the grid AC used to charge the battery is interrupted. The AC-power supply to the UPS is used to maintain the battery state of charge at a sufficient level to keep the inverter operational. It is true to say that a UPS is a special type of inverter system.
