

User solar container energy storage system operation and maintenance

Overview

Why is combining solar and storage a good idea?

Monetizing and combining all the different value propositions of combining solar and storage is an ongoing area of research and business model innovation, and will increase the market for PV and the need for financing. The more interactive nature of battery dispatch (charge/discharge) increases the “operations” part of O&M considerably.

Why do solar plant operators need monitored data?

Solar plant operators require monitored data to analyze and identify the root cause of performance issues observed by the operator. It is critical to identify the root cause of failure to reduce maintenance costs when dispatching service providers.

How do I backup my solar monitoring system?

Reliable data backup and storage should be provided. A best practice is for data loggers to store 6 months of data and to backup data to cloud storage. A reliable method to “backhaul” the data is required. Most connect to the internet via DSL, but be aware that many site owners will not allow the solar monitoring system to use the site network.

How much does a solar energy storage system cost on Alcatraz Island?

The National Park Service budgets, ideally, \$100,000 per year for O&M of this PV energy storage system (308 kW PV; 1,920 kWh battery) on Alcatraz Island. Photo by Andy Walker, NREL Figure 13 shows the PV energy storage system on Alcatraz Island.
