

# Villa glass solar

## Overview

---

### What is Photovoltaic Glass?

Photovoltaic glass represents the natural evolution of solar energy: a smart, aesthetic, and efficient way to generate electricity from the very structures that surround you. You no longer have to choose between design and sustainability—with this technology, you can have both.

### What is Solarvolt™ glass?

Glass-glass Solarvolt™ glass systems utilizing tempered glass with inter-window strips can be structurally integrated into building envelopes and roof surfaces adjacent to heated rooms. For transparent or vision glazing, solar cells can be arranged to create stripes or squares to achieve high visible light transmittance.

### What are glass-glass solar panels?

Glass-glass solar glass systems, also known as glass-glass solar panels, offer plenty of options for design and construction. Vitro Architectural Glass specializes in developing optimal solutions for these projects.

### Can glass-glass solar panels be installed on glass facades?

Customized glass-glass solar glass systems, which are solar panels with solar cells arranged between two glass lites, can be installed with most conventional glass building systems. Tailor-made solar systems comply with all design requirements for glass façades.
