## Overview

What is Power Africa off-grid project (PAOP)?

The Power Africa Off-grid Project (PAOP) was launched in November 2018 to accelerate off-grid electrification growth across SSA.

Are off-grid power systems sustainable for rural electrification?

Economic challenges dominate sustainable delivery of off-grid power systems for rural electrification. Off-grid hybrid power systems with renewable energy as the primary resource remain the best option to electrify rural/remote areas in developing countries to help attain universal electricity access by 2030.

What is an off-grid Solar System?

It is imperative to emphasize that off-grid systems come in two forms: standalone systems often referred to as Solar Home Systems (SHS) and isolated mini/micro-grids with single or hybrid energy sources . A 2015 report by IRENA classified micro-grids and mini-grids according to generation capacity as 5–100 kW and 0–100,000 kW respectively .

What is an off-grid power system?

Off-grid Power Systems (OGPS) with renewable energy (RE) sources offer an alternative pathway to achieving total electrification in such circumstances . The IEA, in a 2011 study, attested that the expansion of the grid is effective for urban areas and 30% of unelectrified rural areas . The remaining 70% is best suited for off-grid systems.
