

# What does a solar module include

## Overview

---

The main components of a solar module include solar cells, a frame, a glass cover, a backsheet, and junction box. What are solar modules?

In solar panels, this device plays a key role. Solar modules are devices that convert the sunlight that strikes the solar panel to generate electricity using photovoltaic cells. This solar device typically consists of numerous photovoltaic cells that are interconnected within a single frame.

What are the components of a solar module?

The main components of a solar module include solar cells, a frame, a glass cover, a backsheet, and junction box. The solar cells are the most important part of the module, as they are responsible for converting sunlight into electricity.

How do solar modules work?

Solar modules work by harnessing the energy from sunlight and converting it into electricity. When sunlight hits the solar cells within the module, it excites the electrons in the cells, creating an electric current.

What is the principle of a solar module?

The principle of a solar module, or a photovoltaic module, is to convert sunlight directly into electricity by the photovoltaic effect.
