

What tests do battery cabinets need to do

Overview

What are the testing requirements for battery cabinets?

VDMA 24994 defines the testing requirements for battery cabinets. Only cabinets that pass rigorous practical tests with lithium-ion batteries receive an ECB-S certificate. Testing can only be carried out by accredited laboratories. In Europe, there are just two: MPA Dresden (Germany) and GryfitLab (Poland), both recognised by ECB-S.

What does a battery lab need?

In addition to having the capacity to bring the energy in for the batteries, the lab will also need the ability to clear out any resulting gases from the batteries, smoke from fires, and water used to cool batteries suffering an “event.” “At cell level, you can think about the size cells you’d you be testing,” suggested Ingram.

Do battery test labs care about chemistry?

The good thing is that battery test labs don’t care what chemistry the batteries are so when a company has built sufficient testing capacity, it is able to keep working with other chemistries as they become available.

How do I choose a battery storage cabinet?

Capacity Requirements: Ensure the cabinet accommodates the quantity and size of batteries used in your workplace. Regulatory Compliance: Choose a cabinet that meets safety standards for Class 9 Dangerous Goods. Durability: Look for a heavy-duty lithium battery storage case designed for long-term use.
