

Which solar glass sun room should I choose

Overview

Which type of glass is the safest for a sunroom?

Standard glass, known as 'float glass,' is not the safest option for sunrooms. It is fragile and brittle, allowing heat from the sun to pass through and warm up the space. When broken, float glass shatters into small shards and splinters that can penetrate the skin and cause injury or bodily harm.

Is double-paned glass suitable for a sunroom?

For a homeowner in a mild climate, double-paned glass may be sufficient to keep a sunroom comfortable. However, tinted glass, which has many of the heat-reducing benefits of Low-E coating, also dims the light that comes into the sunroom. This can be beneficial in sunrooms where people plan to watch television, as it reduces glare.

Does choosing vinyl windows affect a sunroom?

The type of vinyl windows you choose for your sunroom addition can have a big impact on how the sunroom looks and feels. The glass you specify for these windows will affect comfort. Not all window glass is created equal, and for sunrooms, which are made mostly of windows, the glass you choose is especially important.

What type of glass should I use for my solar panels?

- The specification of the glass is therefore likely to be determined by the structural/safety requirements rather than by the acoustic requirements
- We recommend that the glass is:
 - tempered, to toughen it and to avoid shattering in the event of a collision;
 - laminated – essential to incorporate and protect the solar panel anyway.
