## Overview

---

Energy conversion is a fundamental process that finds application in diverse domains, including renewable energy systems, electric vehicles, and industrial power systems. The selection of an appropriate.

How does the proposed topology solve the wind power curtailment problem?

Compare to the traditional offshore wind power transmission system, the proposed topology cancels the expensive offshore platform, and solve the wind power curtailment problem. In addition, the corresponding control and modulation scheme of the proposed topology are implemented.

Is a series-parallel connected DC collection topology suitable for all-DC offshore wind power system?

All-dc offshore wind power system is a promising solution for long distance and high-power transmission. This paper proposes a series-parallel connected DC collection topology for all-dc offshore wind power system. On the one hand, a novel series-parallel modular multilevel converter is proposed for the medium-voltage high-power wind turbines.

What is a point-to-point topology of an offshore wind farm?

The point-to-point topology of the offshore wind farm connected to the grid via flexible DC transmission is shown in Supplementary Figure S2, where WF represents the offshore wind farm and VSC represents the voltage source converter. In point to point topology, a single offshore wind farm is directly connected to a single onshore substation.

Can encoding network topology be used to optimize wind turbine radial clusters?

In the research of topology optimization of power collection system, a technology of encoding network topology into binary strings was proposed to obtain specific optimal configuration of wind turbine radial clusters (Dahmani et al., 2015).
